

Software Engineer - Digital Cockpit & In-Car Experience (m/w/d)

LOCATION
Kuala Lumpur

COMPANY
ARRK Malaysia Sdn Bhd

CONTRACT TYPE
Full-time

Form of Work
Office

WHAT TO EXPECT

We are looking for a Software Engineer to join our growing automotive software team in Malaysia. You'll help build the software that runs directly in and on the vehicle - from cockpit displays to in-car interactions - for leading global OEMs. Our work spans both series development and early-stage concepts and PoCs, so you'll get hands-on experience with both production-grade systems and forward-looking innovation projects - with clear opportunities to grow toward more senior technical responsibility over time.

YOUR TASKS

- Develop software for Linux- and Android-based embedded systems using modern tools and development methods
- Implement UI/UX concepts in software for next-generation vehicle cockpits
- Support rapid prototyping of design and interaction concepts on embedded systems and mobile devices
- Contribute to the design and integration of AI-based features in the vehicle context
- Collaborate closely with cross-functional and international teams (engineering, design, project management)
- Write clean, well-tested, and maintainable code following established coding standards
- Support debugging, testing, and quality assurance activities across the software lifecycle

YOUR PROFILE

- Degree in Computer Science, Electrical Engineering, Software Engineering, or a related field.
- Solid programming skills in C++, Kotlin, and Python.
- Initial hands-on experience in software development through internships, working student positions, academic projects, or professional roles.
- Good understanding of Embedded Linux and embedded software development.
- Experience with Android Automotive OS and in-vehicle software platforms.
- Knowledge of Qt/QML and modern UI/HMI development.
- Familiarity with CI/CD pipelines, version control systems, and modern software engineering practices.
- Understanding of automotive communication technologies such as CAN, Automotive Ethernet, or vehicle software architectures.
- Strong problem-solving abilities and a structured approach to technical challenges.
- Good communication skills and fluency in English, both written and spoken
